MAROKA MUSA CALVIN

Junior Software Developer | Backend | Full-Stack | Cloud | Machine Learning

South Africa | your-email@example.com | +27 XX XXX XXXX | GitHub: add link | LinkedIn: add link | Portfolio: add link

PROFESSIONAL SUMMARY

Computer Science student and junior developer with experience in Python, backend development, full-stack projects, databases, APIs, cloud concepts, and machine learning. Strong interest in building practical software systems, including booking platforms, REST APIs, real-time applications, GPS tracking, and Automatic Speech Recognition research.

TECHNICAL SKILLS

Languages	Python, JavaScript, HTML, CSS, SQL
Backend	REST APIs, Django, server-side logic, authentication, request handling
Databases	MySQL, PostgreSQL concepts, Firebase, CRUD operations
Machine Learning	NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, data pipelines
Cloud & Tools	AWS, Boto3, Git, GitHub, Firebase Hosting, deployment workflows

EXPERIENCE

Computer Science Tutor

- Supported students with programming, debugging, database concepts, and problem-solving.
- Explained technical concepts in a simple and practical way to improve understanding.
- Assisted students with assignments, coding exercises, and exam preparation.

SELECTED PROJECTS

Northern Sotho ASR System

ASR research project using Wav2Vec-XLS-R 300M to convert Northern Sotho speech into text transcripts.

Makgobelo Lodge Booking System

Full-stack booking system for room availability, guest bookings, and admin management.

Scalable REST API Booking Management System

Backend API project focused on booking data, request handling, validation, and CRUD operations.

Real-Time Chat Application

Messaging application focused on real-time communication and responsive frontend behavior.

GPS Tracking System

Location-based project designed around tracking data, updates, and monitoring workflows.

CERTIFICATIONS

Python for Machine Learning & Data Science Masterclass - Udemy, 2026

Training in Python data science and machine learning, including real-world datasets, feature engineering, classification, regression, visualization, NumPy, Pandas, Matplotlib, Seaborn, and Scikit-learn.

Python Programming for AWS: Learn Python with AWS and Boto3 - Udemy, 2026

Training in Python, AWS, Boto3, cloud automation, and working with AWS services for backend and cloud-based applications.

Python on the Backend - Udemy, 2026

Training in backend Python development, server-side logic, request handling, and API-based applications.

EDUCATION

Computer Science Student
